

ProtectorVent Range

Protecting and ventilating vital electronics inside control and IT data cabinets/panels

Applications

- Outdoor switchyard controls
- MCC cabinets in geothermal areas and steam pads
- Outdoor cabinets in or near P&P mills
- Swimming pool controls
- Waste water and water treatment plant controls
- Dairy co milk reception control panels

Special Features

- IP67 rated
- Corrosion resistant stainless steel construction
- Variable volume control in larger units
- Servicing media is quick and simple
- Range of configurations to suit any need
- Long life thanks to Purafil gas-phase media

Construction

Eliminate harmful corrosion in important control cabinets by installing ProtectorVent units. It is impossible to seal Control or IT data cabinets 100% against corrosion by simply closing the door.

Additionally any heat build up inside the cabinets requires venting.

Protectorvent overcomes these problems by positively pressurising the cabinet and removing the gaseous contamination before it enters the cabinet, plus for larger units offers ambient air cooling to the cabinet. Available in a range of sizes and configurations for cabinets large and small
